

# WOODY PET®

## Pamper Your Horse With The World's Finest Animal Bedding

### WOODY PET® Professional Animal Bedding

#### Horse Stall Benefits

- Reduces flies
- Reduces waste
- Great for foaling
- Extreme absorbency
- Reduces hoof disease
- Reduces ammonia odor
- Environmentally friendly
- Reduces allergy symptoms
- Reduces stall cleaning time
- Reduces respiratory problems
- 100% biodegradable softwood
- Animals stay cleaner and healthier

#### Instructions

- Strip old bedding from stall.
- For 12' x 12' stalls, start with 5 bags on rubber mats, 6-7 bags without rubber mats.
- Remove manure as usual. Do not remove any Woody Pet. The manure breaks it apart, breaking it throughout the stall until it has expanded into fluffy bedding throughout the stall. This normally takes 2-7 days, depending on how much time your horse spends in the stall.
- It is important to use the dry bedding daily with the bedding that has expanded.
- Once the Woody Pet Bedding is activated (fluffy) start removing the fresh patches of urine soiled bedding on sight.
- Regular daily use results in adding 1/3 the amount of bedding you have removed. Average stable horses will use up to one bag per week after the bedding has been activated.
- When doing urine patch removal, Woody Pet bedded stalls need complete deepens approximately every 2-3 months.
- Caution: Once you have placed the new Woody Pet Bedding in your stall, avoid it with water. This will make it fluff up 1-4 times in depth. When using the method it is important to start removing the fresh patches of urine soiled bedding on sight.

#### Recommendations

After the new Woody Pet has expanded into fluffy bedding, it is important to maintain a very tight moisture barrier throughout the bedding in the stall. This will eliminate any airborne dust and will also assist the bedding with holding in the ammonia odors. Spray with a light application of water if necessary.

When manually activating Woody Pet bedding with water, do not overwater. Adding too much water will directly affect the performance of your Woody Pet Bedding.

Use the bedding in your stall daily by pulling it from the wall areas and mix it with the bedding at the center of the stall. This allows the floor bedding to draw excess moisture from the surrounding bedding. This only takes a minute.

Remove any urine or wet patches that appear in the bedding. These dark patches are areas that have been contaminated with urine and are the result of moisture urine being removed and/or not being enough bedding in the stall. Not removing these dark patches will result in unwanted ammonia odors.

Woody Pet bedding is not intended for equine use.

#### SUPERIOR LITTER & BEDDING FOR ALL ANIMALS

- **Small Animal Cages and Litter Trays**  
Remove old bedding. Place residue with Woody Pet. Start with 2 1/2 to 3 lbs in most cages and litter trays. Always remove manure. Woody Pet will fluff up 10x to absorb in depth. Woody Pet lasts longer and will control ammonia odors.
- **Poultry**  
Activate with moisture. Depth in poultry houses should not exceed 1/2 to 3/4 of an inch.

- **Moisture & Odor Control**  
Using Woody Pet with other bedding materials will assist in controlling moisture & odors.
- **Slip Absorbent**  
Spread over petroleum, oil, antiseptic spills or under loading machinery. Sweep up as required.
